

Lumen Editor - Product Overview

A browser-based editor for code and documents, built with React, Vite and CodeMirror 6.

This demo document exercises the built-in PDF viewer: text extraction, page navigation and full-text search are all supported.

Highlights

- Multi-tab editing with split views and per-file sessions
- GitHub repositories opened directly from the address bar or the picker
- Syntax highlighting for 60+ languages, including Dockerfile and shell
- Markdown preview, CSV tables, Word documents and PDF files

Try it

Use the toolbar search box and type 'phoenix' - the page counter will report matches found on the current page. Switch pages with the page menu.

Monthly Revenue (sample data)

Month	Region	Product	Units	Revenue
2026-01	East	Aurora Laptop	420	3,359,580
2026-01	North	Comet Keyboard	1830	911,670
2026-01	South	Nova Monitor 4K	880	2,903,120
2026-02	East	Aurora Laptop	502	4,015,498
2026-02	East	Nova Monitor 4K	640	2,111,360
2026-02	South	Aurora Laptop	298	2,383,702
2026-03	East	Orbit Mouse	5300	1,584,700
2026-03	North	Comet Keyboard	1975	985,525
2026-03	West	Nova Monitor 4K	705	2,325,795
2026-03	West	Orbit Mouse	3120	932,880

The phoenix keyword appears here so search has something to find on page two.

Release Notes

- 1.6.0 Added CSV table view, Word and PDF rendering with search.
- 1.5.2 Fixed Dockerfile keyword color in dark theme; session restore keeps collapsed folders.
- 1.5.0 GitHub repository picker: recents, my repositories, quick search.
- 1.4.0 Split editor with drag-and-drop tabs, VS Code style empty state.

Keyboard Shortcuts

- Ctrl+P Command palette
- Ctrl+Alt+N New file
- Ctrl+B Toggle sidebar
- Ctrl+S Commit and push

Generated for the Lumen editor showcase. End of demo.
